

Sydney and J.L. Huffines Institute for Sports Medicine & Human Performance

2025-26 Graduate Student Research Grant

The Huffines Institute Graduate Research Grant provides financial support for graduate student research that contributes toward the student's education and the Huffines Institute's mission. The grant does not support experiments already funded by other sources, and if awarded, they will be revoked if duplicate funds exist.

The Huffines Institute's **mission** is to be a bridge for scientists, practitioners, and the lay public in the dynamic and ever-changing environment of sports medicine and human performance.

Eligibility

To be eligible, a graduate student must:

- Be Enrolled as a full-time graduate student during the requested funding period.
- Be a Huffines Student Affiliate member working under the direct supervision of a Huffines Faculty Affiliate member. A list of eligible faculty affiliates can be found on the Huffines Institute website.
- Be in good academic standing with a university within the Texas A&M System.
- Not have received a Huffines Student Research Grant during the past funding cycle.

Limitation

- Students under the direct supervision of the Huffines Director or Associate Director are not eligible.
- While Doctoral and Master's students receive priority in the last year of their studies, all graduate students are eligible to apply (see above).
- Funding is limited to direct costs associated with conducting research. Expenses related to the production of the research report or for computer equipment and software are not allowable.
- Travel requests to perform research must be justified and directly linked to data collection. Requests
 for travel to professional meetings to present a paper are funded through a separate Huffines program
 and can be applied for by the applicant.
- Each application request is limited to \$2,500.
- Projects that have not started by February 1, 2025, will be subject to revocation of funding.
- Unspent and unencumbered funds will revert to the Huffines Institute general budget on December 31, 2026.

Post Award Requirements

- Accept the invitation to present project results in poster or oral presentation form at a Huffinessponsored research event during the award period.
- Submit a written report of the research results, along with resulting publications (including published abstracts) and grants submitted from the data no later than December 1, 2026.
- All publications and presentations from the funded research must credit the Sydney and J.L. Huffines
 Institute of Sports Medicine and Human Performance.

Submission Procedures

- The deadline for submission is 5 pm Central Time, September 15, 2025. Late submissions will not be accepted
- Grantees will be notified by letter as to the outcome of their application by October 31, 2025.
- Handwritten applications will not be accepted (the form is a fillable PDF).
- Submissions will be uploaded by an online portal at the Huffines website.

Project Description Sections:

These guidelines are required for a submission to be considered for review.

Format – Single-spaced with 0.5-inch margins. Arial, font size 11, should be used throughout the grant. Section headers should be bolded.

<u>Title</u> – This should clearly describe the project and is limited to 75 characters, including spaces.

<u>Purpose</u> – One-sentence explanation of the goal of the research proposed. This purpose can be stated in the form of the hypothesis being tested.

<u>The project's role in your education and your faculty research advisor</u> – This should be 1-2 sentences indicating the role of this project in your educational curriculum and the extent of overlap with other projects you or your advisor are involved with.

Example: "This project comprises the core of the preliminary studies I am completing to establish preliminary data for my dissertation proposal. Quinton Smith is also completing these studies for his Master's thesis. Further, my PI supports Quinton's studies through other research funds."

Significance (~1 page) – Define the proposed research's positive effect on the knowledge base in this area. As defined by the NIH, this section answers several critical questions. Does the project address an important problem or a critical barrier to profess in the field? If the project aims are achieved, how will scientific knowledge, technical capability, and/or clinical practice be improved? How will completing the aims change the concepts, methods, technologies, treatments, or preventive interventions driving this field?"

<u>Innovation</u> (~1/2 page) – Describe how your approach is different/novel from past attempts to answer this question. What is/are the new and different ways (s) that this project approaches the fundamental question you are addressing? Again, NIH says: "Does the application challenge and seek to shift current research or clinical practice paradigms by using novel theoretical concepts, approaches or methodologies, instrumentation, or interventions? Are the concepts, approaches or methodologies, instrumentation, or interventions novel to one field of research or novel in a broad sense?"

Approach (~1 page) – Briefly and concisely describe how the stated purpose will be accomplished. The focus should be on the experimental design (i.e., how will you test your hypothesis?) versus extensive methods detail. Given that your research advisor must sign off on the proposal, it would be adequate to reference previous work from your lab using the same techniques. IMPORTANTLY, this section should indicate the status of this protocol with the appropriate compliance committee (e.g., IRB, IACUC, IBC). Given the extended time required for compliance approvals, experiments with active IRB/IACUC approval will be given preference. If your protocol has received approval, please provide a copy of the approval notification (not counted in the grant page limit). Suppose your project is still pending approval, and you are awarded a grant. In that case, you cannot expend funds until final approval from the appropriate compliance committee.

<u>Dissemination/funding plan</u> (~1/2 page) – Summarize how you intend to disseminate the results (e.g., presentations, papers to what journals), an itemized timeline for this dissemination, and what external funds will be sought with these results.

<u>NIH-style Biosketch</u> (2 pages) - Your abbreviated 'scientific resume' using the current NIH biosketch format, but with a two-page limit for this application.

<u>Application of project</u> (Not included in the 5-page maximum) - As part of the application, a 500-word lay-level paragraph regarding the topic of their grant is required. These articles should be written to increase interest in the topic and focus on the "real-world" applications and ramifications. **This 500-word paragraph is a significant review criterion for deciding which applications to fund.**

<u>Budget</u> (separate page) - Provide an itemized budget not to exceed \$2,000 listing proposed expenditures in the following categories: 1) Equipment, 2) Supplies & Expendables, 3) Essential Travel for Data Collection, 4) Other.

References - Please provide a list of references. The format of references is AMA.

Reviewer Guidelines:

Understanding the guidelines on which your application will be judged is essential. The reviewers are external to Texas A&M and will not have a conflict of interest. Reviewers will comment on the following core criteria of each proposal:

- a) Adherence to Instructions: Did the applicant conform to all guidelines? This review criterion is important because if the applicant cannot follow directions, there is doubt whether the proposed research design will be successfully completed.
- b) Significance: Does the project address an important problem or a critical barrier to progress in the field?
 - c) Investigators: Can the individual do the project?
- d) Innovation: Are the concepts, approaches, or methodologies novel to the field?
- e) **Approach:** Does the approach proposed provide the best chance for success?
- f) **Application:** Does the included lay article indicate a comprehensive understanding of the research and provide an avenue for transferring knowledge of the results to the lay public?
- The reviewers will score each core criterion on a 1 (exceptional) 9 (poor) scale.
- The reviewers will also give an overall priority score ranging from 1 (exceptional) to 9 (poor).
- This overall priority score <u>will not be</u> an average of the core criteria scores but an overall score considering the complete package and likelihood of success.
- Overall priority scores from the reviewers for each application will be averaged to give each grant an overall priority score. That average score will be multiplied by 10 for the final score.
- The grant applications will be ranked based on their final priority score, with funding beginning with the proposal with the **lowest** priority score.

Important: The account for each awarded grant will be audited on February 1, 2025. The lack of expenditures from an account will be considered 'non-progress' and may lead to the award being revoked.
